What is claimed is:

1. A location confirmation system comprising:

a plurality of mobile terminals each having a positioning unit for positioning a current location of a movable body and a communication unit for transmitting and receiving information to and from an information center; and

the information center having a center communication unit for transmitting and receiving information to and from the plurality of mobile terminals and a storage unit for storing information received from the plurality of mobile terminals,

wherein a timing at which the information is transmitted or received to or from other mobile terminal is decided in accordance with timing information specifying a timing at which the information transmitted from a predetermined mobile terminal is transmitted or received.

- 2. The location confirmation system according to claim 1, wherein the timing information includes identification information for identifying the predetermined mobile terminal and definition information for defining the timing.
- 3. A computer program product for causing a computer to serve as a location confirmation system, the program product comprising:

means for positioning a current location of a movable body;
means for transmitting/receiving information to and from
an information center;

means for transmitting/receiving information to and from a plurality of mobile terminals;

means for storing information received from the plurality of mobile terminals,

wherein a timing at which the information is transmitted or received to or from other mobile terminal is decided in accordance with timing information specifying a timing at which the information transmitted from a predetermined mobile terminal is transmitted or received.

4. An information transmitting method for use in a location confirmation system including a plurality of mobile terminals each having a positioning unit for positioning a current location of a movable body and a communication unit for transmitting and receiving information to and from an information center, and the information center having a center communication unit for transmitting and receiving information to and from the plurality of mobile terminals and a storage unit for storing information received from the plurality of mobile terminals, the information transmitting method comprising:

deciding a timing at which the information is transmitted or received to or from other mobile terminal in accordance with timing information specifying the timing at which the information transmitted from a predetermined mobile terminal is transmitted or received.
